

Brand New Day

NU.U OFFERS INSTANT, EFFECTIVE AND NON-INVASIVE TREATMENTS FOR PERFECT, BLEMISH-FREE SKIN

Taking care of your skin doesn't require long, expensive sessions and invasive procedures. Effective solutions to take care of blemishes are available, and these quick fixes offer immediate results so you can look your best in time for that special celebration this month.

At Nu.U, a variety of quick fixes that have no down time and instantly rejuvenate your skin are available. Dr Chew, founder of Nu.U Aesthetic Clinic, recommends the following treatments that targets different skincare needs.

SILKPEEL™

This modern, non-invasive treatment offers exfoliation and delivers nutrients to your skin at the same time, without the risks of developing complications that other treatments such as microdermabrasion, chemical peels and laser treatments can sometimes cause. SilkPeel™ does not use abrasive materials to exfoliate the skin, and addresses a wide range of dermatological conditions that include hyperpigmentation, acne and fine line wrinkles. The treatment is immediately effective and with zero down time, offering busy professionals a simple one-step method to have blemish-free skin.

SUN-DAMAGED SKIN

On our sunny island, it is not only necessary to take precautions to protect our skin from sun damage, but also find effective solutions to treat pigmentation and age spots. Photo rejuvenation using the Ellipse I²PL system removes sun damage by using light of specific wavelengths that destroy skin cells that contain a lot of melanin, which causes age spots and pigmentation. This technique is completely safe, and requires virtually no post-treatment care. The result is smoother and even-toned skin that lasts a long time.

BOTOX®

Getting rid of fine lines or facial contours is easily accomplished today with the use of BOTOX®. The natural protein relaxes specific facial muscles that cause wrinkles to appear, thus smoothing the skin. It can also be used to contour the face by reducing the bulk of jaw muscles, making the jawline less prominent. Application of BOTOX® takes only up to 10 minutes, and results last up to six months.

ESTHÉLIS SOFT

Dark eye circles and eye bags plague everyone as you age. A simple method of fixing your eye bags and dark eye circles is by using Esthélis Soft, which is developed from plant hyaluronic acid, a biocompatible product. The procedure takes less than an hour, and the doctor carefully places intra-dermal injections in specific areas, with immediate effects. Wrinkles and marks are smoothed and eye bags disappear, lasting up to six months.
